To Preserve

- **Out-of-arc shooting efficiency:** Shooting 2 out of 3 three-point shots (67%), which yielded all of the player's 6 points in the game. The player showed high accuracy in shooting situations in transition and in the half-court (Q3 05:13, Q4 02:20).
- **Effective defensive rebounding:** Contribution of 2 defensive rebounds in 17 minutes of play, meeting expectations for the small forward position in preventing second-chance opportunities for the opponent (Q2 00:55, Q3 06:43).

To Improve

- **Finishing in the paint:** Missing 2 two-point shots (0%), including a critical layup miss (Q3 05:40) and a missed jump shot (Q4 03:03). The inability to generate points from drives hurt the primary weapon of the small forward position and cost the team 4 direct potential points.
- **Capitalizing on free-throw opportunities:** Missing the only free throw in the game (0 of 1, 0%) during a momentum moment in the third quarter (Q3 04:03). This miss prevented narrowing the gap and stopped a potential run by the team when the margin was only 7 points.
- **Involvement in ball movement:** Recording 0 assists in 17 minutes, significantly lower than the career average of 1.6 assists. This lack of involvement limited the team's offensive variety and made it easier for the opponent's defense to focus on the backcourt.

Weekly Practice

1. **The biggest lever:** Finishing in the paint and drives. 0% from the field for 2 points (0/2) indicates difficulty with contact. Practice at least 15 drives against defender contact in personal training sessions this week, using a power layup. The target for the next game: at least one successful drive ending in a basket or drawing a foul.
2. **Free-throw shooting:** Standing at 0% (0/1) in the current game. Practice a series of 50 free throws at the end of each practice this week when you are in an increased state of fatigue. The target for the next games: reaching at least 75% from the free-throw line.
3. **Creating out-of-arc shooting situations:** An efficiency of 67% (2/3) from three-point range shows high potential that is underutilized due to low volume. Practice off-ball

movement to receive passes in the corners and wings. The target for the next game: increasing shot volume to at least 4 attempts from beyond the arc, while maintaining an efficiency of 40% or higher.
