Games in Analysis: 10 | Small Forward (SF) | Team Transfer: Hapoel Migdal Jezreel (7) ← Maccabi Rehovot (1) + Preseason (2)

Data was cross-referenced against the official Basketball Association box score (8 out of 10 games)

Analysis Summary

The player shows high efficiency from beyond the arc (45% on 19/42) with offensive contribution concentrated mainly in the second quarter, but is characterized by extreme volatility and minimal contribution on weak nights. The transfer between teams during the window changed his role and requires stabilizing playing volume and maintaining consistent involvement throughout all four quarters.

A 10-game window was chosen because below that the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles. Background graphics must be enabled in the print dialog.

To Maintain

- **Excellent accuracy beyond the arc:** Shooting 45% (19/42) from three and an 83rd league percentile rating, serving as a key weapon in spacing the floor for the team.
- **High efficiency in 2-point range:** Maintaining 52% (17/33) on two-point shots in the window, while demonstrating relatively stable percentages also in the last 3 games (56% out of 5/9).

To Improve

- **Extreme volatility in offensive contribution:** In the quarter of his weakest games, he contributed an average of only 0.5 - with almost no measurable contribution - compared to 9.1 on average in the window and 22.5 on good nights. Meaning the average relies on some games, not all of them.
- **Unbalanced production concentration across quarters:** 47% of the points in the window were scored in the second quarter alone (47 out of 100), compared to only 13% in the third quarter (13 points), indicating disappearance in the second half of games.
- **Foul trouble and turnovers at critical stages:** An average of 2.9 fouls per game (only 11th percentile) and a concentration of 60% of turnovers in the second half (9 out of 15), hurting the ability to stay on the floor in decisive moments.

3-Week Plan

1. **The Biggest Leverage: Foul management and minimizing defensive impact:** You record 2.9 fouls per game in just 19.9 minutes (11th percentile). The action: In 1-on-1 defense in quarters 2 and 3, avoid using hands when an opponent attacks the basket and maintain a step's distance. The target: Drop to an average of no more than 2.0 fouls per game and maintain at least 22 minutes of playing time.
2. **Shot Selection and Volume Distribution:** You shot only 42 threes in 10 games (about 4.2 per game) despite 45% success (19/42). The action: Increase outside shooting volume when open at the arc, and aim for at least 6 three-point shots per game. The target: Maintain a minimum of 40% accuracy from three at an increased volume of at least 6 shots per night.

3. **Concentration and Ball Management in the Second Half:** 9 out of 15 of your turnovers happened in quarters 3 and 4. The action: Practice quick passing and avoid unnecessary dribbling under double-team pressure in the second half. The target: Lower second-half turnovers to no more than 1 turnover per game.
