

Niv Lampert

Last 10 Games · 2026-05-15 to 2026-10-04

Games in analysis: 10 Position: Point Guard (PG) Average Minutes: 18.0 Average PIR: 11.2

Data was cross-referenced with the official Basketball Association box score (5 out of 10 games)

Analysis Summary

The club transfer and the transition to prep games led to a significant change in Niv Lampert's role, with his inconsistency posing a major challenge to his continued development as a leading point guard. In his weakest quarter of games, he contributed an average of only 1.5 - with almost no measurable contribution - compared to an average of 11.2 in the window and 26.5 on his best nights. In other words, the average relies on some of the games, not all of them. His minutes ranged from 6 to 34 · part of the variance is due to rotation and not the player.

Window Snapshot (Last 10 Games)

Metric	Average	Last 3 Games	Trend	League Percentile
Minutes	18.0	13.0	▼	36
Points	7.3	5.7	▼	47
Rebounds	3.3	1.7	▼	50
Assists	3.9	0.7	▼	80
2PT%	54% (15/28)	57% (4/7)	▲	—
3PT%	28% (5/18)	25% (1/4)	▼	—

Metric	Average	Last 3 Games	Trend	League Percentile
Turnovers	1.7	0.3	▼	34
Fouls	1.7	0.7	▼	61
PIR	11.2	6.3	▼	59
±	0.7	3.0	▲	47

A 10-game window was chosen because below this the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it, it mixes different periods and roles.

To Maintain

- **High-level passing and game management ability:** During the game window, you recorded an average of 3.9 assists (80th percentile in the league), with a peak of 10 assists against Ironi Nahariya and 9 assists against Maccabi Ma'ale Adumim. Despite the fluctuations in playing time, your level of creativity remains high when everything clicks, and your ability to find open players is a key tool for the team.
- **Efficiency finishing inside the paint:** The 2-point shooting percentage stands at 54% (15/28) throughout the window, rising to 57% (4/7) in the last three games. The ability to drive and finish with a layup or floater is highly efficient and consistent, forming the basis of your offensive game as a creative playmaker.

To Improve

- **Free throw percentages:** Over 9 documented games, you are shooting only 50% (10/20) from the free-throw line. In recent games (such as against Maccabi Petah Tikva and Hapoel Hevel Modiin), these misses prevented easy points and left at least 5 points on the floor, which hurts your efficiency in crucial moments.
- **Shooting from beyond the arc (three-pointers):** The three-point shooting percentage stands at only 28% (5/18) throughout the window, decreasing to 25% (1/4) in the last three games, including 3 consecutive misses against Elitzur Yavne on October 4. As a point guard, the lack of a real outside threat allows defenses to collapse the paint and block your preferred driving and passing lanes.

- **Concentration and turnovers in the fourth quarter:** Out of 15 documented turnovers in the window, 8 turnovers (53%) occurred in the final quarter, compared to 0 turnovers in the third quarter. These turnovers, such as the bad pass and the loss of dribble in the deciding moments against Hapoel Zefat and Elitzur Yavne, directly resulted in fast breaks for the opponent and the loss of critical possessions in the clutch.

3-Week Plan

1. **The biggest lever:** Improving free throw shooting. A figure of 50% (10/20) from the free-throw line in the window shows a need to stabilize the shot. The action: perform 50 free throws at the end of each practice under high fatigue, while maintaining a consistent shooting routine of two dribbles and a deep breath. The target: raise the free-throw percentage to at least 70% in the next five games.
2. Managing and reducing turnovers in the fourth quarter. 53% of your turnovers (8 out of 15) occur in the fourth quarter. The action: in the final quarter, avoid high-risk passes or driving into a crowded defense without a clear exit path; prefer simple passes and patient ball movement in the half-court. The target: no more than a single turnover per fourth quarter in upcoming games.
3. Increasing the volume of 2-point shots in the paint. Your excellent 2-point efficiency (54% in the window) shows you are lethal when driving, but the volume is low (less than 3 shots per game). The action: exploit defensive switches by the opponent to drive to the rim at least 4 times per game, instead of settling for a pass or an outside shot. The target: averaging 5 2-point attempts per game, while maintaining at least 50% success.

Game-by-Game Breakdown

Date	Opponent	Min	Pts	Reb	Ast	PIR
2026-05-15	Elitzur Yavne	6	2	1	0	0
2026-05-19	Maccabi Haifa	18	7	3	5	8
2026-05-24	Maccabi Ma'ale Adumim	22	9	8	9	24
2026-05-27	Hapoel Zefat	21	18	6	6	21
2026-07-20	Ironi Nahariya	34	16	3	10	29

Date	Opponent	Min	Pts	Reb	Ast	PIR
2026-08-05	Elitzur Yavne	22	2	0	6	5
2026-09-18	Elitzur Yavne (Prep)	18	2	7	1	6
2026-09-23	Hapoel Hevel Modiin (Prep)	12	7	3	0	8
2026-09-30	Maccabi Petah Tikva (Prep)	13	6	0	2	8
2026-10-04	Elitzur Yavne (Prep)	14	4	2	0	3

Bold cells = One of the player's top 5 games this season in this metric (for fouls and turnovers - the lowest).
