

Amin Stevens

Last 10 Games · 2026-05-23 to 2026-10-16

Games Analyzed: 10 · C · Mid-season club transfer (Maccabi Tapuzina Rishon LeZion ← Ironi Nahariya)

Data cross-referenced with the official Basketball Association box score (9 out of 10 games)

Analysis Summary

Amin Stevens displays a strong offensive improvement trend in the current window, evidenced by an increase to 27.7 points on average in the last 3 games alongside a Performance Index Rating (PIR) of 31.7. The practical implication is that his club transfer to Ironi Nahariya expanded his role and increased his production in the paint, but he is required to maintain discipline regarding fouls and turnovers to maximize his presence in clutch minutes.

A 10-game window was chosen because below that the average is too noisy (standard error 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles.

Maintain

- **High finishing efficiency in the paint:** Maintains an impressive 71% (70/98) two-point shooting percentage in the window (and 66% (21/32) in the last 3 games), cementing his status as a premier scoring option under the basket for the center position.
- **Offensive production consistency:** Generates a high average PIR of 25.3 in the window with a relatively low standard deviation and stability in scoring across all four quarters (from 37 points in Q1 to 48 in Q4).

Improve

- **Foul management in the second half:** 10 out of the 12 fouls accumulated in the window (83%) came in quarters 2 and 3 (5 fouls in each quarter), limiting his availability for long stretches during critical minutes.
- **Turnovers in passing situations:** 8 out of the 13 turnovers (61%) were concentrated in quarters 2 and 3, mainly resulting from inaccurate passes in the post-up or against half-court pressure.

- **Outside shooting volume:** 3-point percentage stands at 100% but is based on a tiny volume of 2/2 in the window (and 1/1 in the last 3), a statistically insignificant figure that requires avoiding outside shots and focusing fully on the paint as a natural center.

3-Week Plan

1. **The biggest leverage:** 2 fouls accumulated in Q2 or Q3 hurt your game continuity. Defensive action: in the paint, avoid unnecessary contact when stepping out to screens and keep hands straight up without dropping your hips. Target: finish the first half with a maximum of 1 personal foul.
2. The 8 turnovers out of 13 in quarters 2 and 3 resulted from inaccurate passes. Action: when passing out of a post-up under pressure, execute a clear pivot pass or pass directly to the nearest guard instead of unnecessary dribbling. Target: reduce turnovers to an average of less than 1.0 per game over the next 3 weeks.
3. The 6.6 rebounds in the window (83rd percentile) is excellent but can be increased. Action: in the battle for defensive rebounds, use a full body box-out even before going up for the ball. Target: rise to an average of 7.5 rebounds per game.
