Analysis Summary

Rosenberg shows exceptional offensive efficiency for a guard-wing player with 51% (25/49) from beyond the arc and a plus-minus rating of +4.6, but extreme game-to-game volatility limits his impact ceiling. In his weakest quarter of games, he contributed an average of only 1.5 PIR—virtually no measurable contribution—compared to a window average of 12.0 and 28.5 on his best nights. In other words, the average relies on a portion of the games, rather than all of them.

Window Snapshot (Last 10 Games)

Metric	Average	Last 3 Games	Trend	League Percentile
Minutes	21.1	20.3	■	54
Points	13.1	14.3	▲	81
Rebounds	4.5	5.3	▲	68
Assists	1.4	1.7	▲	44
2PT %	58% (23/40)	62% (8/13)	▲	60
3PT %	51% (25/49)	62% (8/13)	▲	99

Metric	Average	Last 3 Games	Trend	League Percentile
Turnovers	1.7	2.0	▼	33
Fouls	3.4	2.7	▲	2
PIR	12.0	16.3	▲	69
±	+4.6	+3.0	▼	84

A window of 10 games was chosen because below this, the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it, it mixes different periods and roles.

Strengths to Maintain

- Phenomenal shooting from beyond the arc: **51% (25/49)** accuracy over the window, improving to **62% (8/13)** in the last three games (league percentile **99**). Production is steady on a high volume of 4.9 attempts per night, hitting 2+ three-pointers in 6 out of 10 games.
- Finishing and efficiency in the paint: **58% (23/40)** on 2-pointers over the window while maintaining consistency at **62% (8/13)** in the last 3 games, creating a distinct dual threat at the small forward position combined with an overall plus-minus rating of **+4.6** (percentile **84**).

Areas for Improvement

- Severe foul trouble in the fourth quarter: **13 out of 34 fouls (38%)** were called in the final quarter, compared to only 6 in the first quarter. This accumulation of **3.4** fouls per game (a very weak league percentile of **2**) led to 3 games with 4 fouls and 1 game with 5 fouls, directly resulting in limited closing minutes and a drop to just **12** minutes on 2026-05-08.
- Sharp production gap between halves: **61 out of 131 points (47%)** were scored in the second quarter alone, compared to **21 points (16%)** in the first quarter and **24 points (18%)** in the fourth quarter. Relying on an offensive explosion in a single quarter lowers his contribution floor to **1.5** PIR on weak nights and costs the team in game-opening and close-game closing offensive droughts.
- Decision-making and passing under pressure: **13 out of 17 turnovers (76%)** occurred in the second half (5 in Q3, 4 in Q4), the vast majority on flawed passes in key action lanes (e.g., 3 turnovers against Maccabi Haifa on 2026-05-19), against a low average of **1.4** assists (percentile **44**), resulting in a negative assist-to-turnover ratio of **0.82** and giving opponents easy transition points.

3-Week Action Plan

1. **#1 - Highest Leverage:** 13 fouls in the fourth quarter (38% of total fouls) and 3.4 fouls per game limit your presence in crunch time. Action: In personal defense and help defense in the fourth quarter, refrain from reaching in for steals and aggressive body contact in transition; maintain a solid stance and vertical contest in the paint. Target: No more than 1 foul total throughout the fourth quarter, and lowering the average below 2.5 fouls per game.
2. **Balancing Output Throughout the Game:** Only 16% of your points come in the first quarter (21 out of 131) compared to 47% in the second quarter. Action: Initiate 2 planned possessions driving to the paint or coming off screens for a jumper in the first 4 minutes of the game, rather than waiting to get into the game's rhythm in the second quarter. Target: At least 4 points in the first quarter of every game in the next window.
3. **Passing Quality and Assist-to-Turnover Ratio:** 17 turnovers vs. 14 assists (0.82 ratio) and a concentration of passing turnovers in the third quarter (29%). Action: On drives into the paint against double help, execute a two-foot stop and kick out with a safe arc to shooters in the corners, avoiding sharp passes through congested passing lanes. Target: Increase the assist-to-turnover ratio to at least 1.5 (average 2.0 assists and maximum 1.2 turnovers per night).

Per-Game Breakdown

Date	Opponent	MIN	PTS	REB	AST	PIR
2026-04-14	Maccabi Ashdod	28	23	7	0	30
2026-04-17	Hapoel Haifa	24	20	3	0	16
2026-04-24	Maccabi Ma'ale Adumim	23	11	7	2	4
2026-04-28	A.S. Ramat HaSharon Yarkon HaSadeh	18	2	3	4	1
2026-05-08	Maccabi Petah Tikva Elitzur	12	9	0	0	4

Date	Opponent	MIN	PTS	REB	AST	PIR
2026-05-12	A.S. Ashkelon / Kiryat Gat	21	7	4	3	2
2026-05-15	Elitzur Yavne	24	16	5	0	14
2026-05-19	Maccabi Haifa	18	10	6	0	6
2026-05-24	Maccabi Ma'ale Adumim	20	13	5	2	16
2026-05-27	Hapoel Safed / Galil Daniel	23	20	5	3	27

Highlighted cells = One of the player's top 5 games this season in this metric (for fouls and turnovers - lowest).
