Executive Summary

In his weakest quarter of games he produced only 0.5 on average, next to no measurable contribution, against 10.5 in the window and 26.5 on good nights. The average rests on some games, not all of them. His minutes ranged from 6 to 34 · part of the spread is rotation, not the player.

A 10-game window was chosen because below this the average is too noisy (standard error 3.2 points in 5 games vs 2.2 in 10), and above it mixes distinct periods and roles. Remember to check "Background graphics" in the browser print dialog.

To Preserve

- **Playmaking engine & elite assist scaling:** Averaging 3.9 assists overall and 5.7 in the last 3 games, ranking in the 74th percentile among league guards with consistent distribution and a high assist-to-turnover upside.
- **Efficient interior finishing volume:** Shooting 58% (14/24) on 2-point attempts across the window, converting driving lanes into high-percentage looks inside despite a wide minute fluctuation.

To Improve

- **Foul accumulation and rotation impact:** Averaging 2.7 personal fouls (18th percentile, where higher is better), peaking at 3.7 in the last 3 games with heavy concentration in Q2 (35%) and Q4 (48%), cutting short defensive stints.
- **Late-game turnover spikes:** Committing 1.7 turnovers overall with 59% of total turnovers occurring in the 4th quarter, leading to offensive stagnation during clutch possessions.
- **Recent 2-point shooting drop:** Dropping to 20% (1/5) on 2-pointers in the last 3 games compared to the 58% (14/24) window baseline, reflecting forced drives under fatigue.

3-Week Action Plan

1. 2 personal fouls in the first 6 minutes of Q1 cost you 4 bench minutes. Action: Maintain arm-length distance on the ball-handler in opening quarters instead of initiating body contact. Target: No more than 1 foul before halftime.
2. 10 turnovers concentrated in 4th quarters across the window stalled late offense. Action: Transition earlier into set pick-and-rolls with 14 seconds remaining on the shot clock instead of overdribbling. Target: Limit 4th quarter turnovers to under 0.5 per game.
3. 2-point efficiency dropped to 20% (1/5) in the last 3 games. Action: Prioritize pull-up floaters and dump-offs over contested layups when primary driving lanes collapse. Target: Raise 2-point accuracy back above 50%.
