A 10-game window was chosen because below that the average is too noisy (standard error 3.2 points in 5 games vs 2.2 in 10), and above it mixes different periods and roles.

Maintain

- Extremely high efficiency in 2-point field goals at 80% (4/5) in the window, indicating precise shot selection inside the paint and stable execution.
- Stability in passing assists with an average of 4.4 per game, alongside a positive PIR of 15.4 and maintaining consistent productivity across the 5 games (low standard deviation in PIR and points metrics).

Improve

- High turnover volume situated at 4.6 per game across 5 games, with a negative peak of 8 turnovers in the game against A.S. Ashkelon / Kiryat Gat.
- High concentration of turnovers in the first quarter standing at 5 turnovers (45% of all turnovers in the window), affecting the start of the game.
- Negative plus-minus index of -6.0 on average in the window, with an additional drop to -15.7 in the last 3 games.

3-Week Plan

1. **The Biggest Leverage:** 4.6 turnovers per game cost you unnecessary ball possessions. Action: Limit the number of dribbles in transition attacks and decline high-risk passes in the first quarter. Target: Reduce turnovers to an average of less than 3.0 per game.
2. 2.6 fouls per game in the window. Action: When defending perimeter players in the third and fourth quarters, maintain static positioning without making unnecessary hand movements.

Target: Maintain a maximum of 2 fouls per game.

3. 4/10 3-point shots in the window (40%). Action: Increase outside shot volume to a minimum of 4 well-judged shots per game from coordinated situations. Target: Maintain a percentage above 35% on a volume of 20 cumulative shots in the next window.
