A 10-game window was chosen because below that the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles.

Maintain

- High shooting percentage from the two-point range standing at 80% (4/5) cumulative in the window, reflecting high efficiency in finishing plays inside the paint.
- Consistent contribution in creating opportunities for teammates with 4.4 assists on average in the window, including a high of 7 assists in the game against Maccabi Av Gad Raanana on 2026-10-23.

Improve

- Low shot volume beyond the three-point arc, standing at only 4/10 (40%) cumulative in the window, requiring the creation of more outside shot volume in accordance with the demands of the shooting guard (SG) position.
- Maintaining focus and reducing turnovers, which average 4.4 turnovers per game in the window (with an average of 5.0 turnovers in the last 3 games), with 45% of the turnovers concentrated in the first quarter.
- Reducing early foul trouble, which is concentrated mainly in the third quarter (67% of all fouls in the window), to prevent harm to the continuity of minutes

on the floor.

3-Week Plan

1. **The biggest leverage: Practice shooting from beyond the three-point arc out of movement and passing situations**, with the goal of increasing shot volume from 10 to 18 cumulative attempts per week without dropping below 35% accuracy.
2. **Improve ball control in the first quarter:** Reduce the number of turnovers in the opening quarter from an average of 2.5 turnovers for the first quarter (out of 5 total) to no more than 1 turnover in this quarter per game, through quicker decision-making on initial passes.
3. **Maintain focus in 1-on-1 defense:** Reduce the number of personal fouls in the third quarter by maintaining arm's length distance and avoiding unnecessary contact, with the goal of dropping below 2 fouls per game cumulatively.
