Games analyzed: 10

Data cross-referenced with the official Basketball Association box score (8 out of 10 games)

Analysis Summary

In his weakest quarter of games, he contributed an average of only 1.5 - almost no measurable contribution - compared to an average of 11.5 in the window and 29.0 on good nights. Meaning the average relies on some games, not all of them.

A 10-game window was chosen because below that the average is too noisy (standard error of 3.2 points in 5 games vs 2.2 in 10), and above it mixes different periods and roles.

Maintain

- **High shooting efficiency from beyond the arc:** The player records 51% (19/37) from three and 59% (16/27) from two in the window, indicating quality shot selection at the small forward position.
- **Significant production on peak nights:** Reaching a ceiling of 29.0 PIR and peaks of up to 31 PIR (against Elitzur Shomron) proves very high offensive potential when the game flows to his pace.

Improve

- **Consistency between game nights:** A floor of 1.5 PIR on average in the worst quarter indicates that on his less good nights the player disappears from the game, unlike the average of 11.5 in the window.
- **Contribution in clutch minutes:** True shooting percentage index of only 38.8% in the last 5 minutes of Q4/OT (vs 71.6% in the whole game) points to a drop in sharpness under pressure. Action: Request easier passes in transition instead of difficult shots beyond the arc. Target: Raise shooting percentage in closing minutes above 45%.

- **Foul control in the first quarter:** Although only one game included 2+ fouls in the first 6 minutes, this figure raised total fouls by 22% in Q1 (6 fouls). Action: Defending the ball handler in the opening quarter, maintain an arm's length instead of early contact. Target: No more than one foul in the first quarter in each game.

3-Week Plan

1. **The biggest leverage:** Maintain outside shot volume (51% out of 37 attempts) but avoid difficult pull-up shots in clutch minutes (only 2/6). Target: At least 3 drives to finish in the paint in every game instead of tough outside shots.
2. Practice quick decision making under pressure in closing minutes to reduce turnovers and maintain a high PIR average even when the game is close. Target: Maximum of one turnover in the last 5 minutes of the game.
3. Maintain correct positioning on defensive rebounding (3.9 per game) and avoid unnecessary fouls in the first quarter (averaging 23% of total fouls). Target: Limit to only one foul until halftime in every game.
