Games Analyzed: 10 | Position: Shooting Guard (SG) | League: Leumit

Data cross-referenced with the official Basketball Association box score (8 out of 10 games)

Analysis Summary

The player demonstrates a consistent upward trend in playing volume and efficiency index over the recent window, with the main highlight being a dramatic improvement in his offensive game, peaking at 9.0 points on average over the last 3 games. This means the player is solidifying his status as a reliable starting scorer, though he must stabilize his offensive contribution on tough nights and improve his shot selection beyond the arc to fulfill his full offensive potential.

A 10-game window was chosen because anything below that makes the average too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles. Background graphics must be enabled in the print dialog.

Maintain

- **High efficiency in close-range finishes and layups:** The player records 60% (18/30) on two-pointers in the window, with an amazing peak of 100% (7/7) in the last 3 games, indicating high consistency in capitalizing on close-range situations.
- **Ball security and turnover control:** An average of only 0.9 turnovers per game in the window (and a drop to just 0.3 in the last 3 games) indicates smart decision-making and extreme caution with ball possessions.

Improve

- **Volume and accuracy in outside shooting:** With a percentage of 26% (7/27) from three-point range over 10 games, volume and accuracy have not yet reached the level required of a leading scorer; Action: Expand your operating range to the mid-range area where your percentages are higher, or call for light screens before shooting from the outside. Target: Raise three-point percentage to at least 33% in the next sample.
- **Reduction of early fouls in first quarters:** Data shows an accumulation of 7 fouls in the first quarter (25% of total fouls) and 8 in the second quarter during the window; Action: In man-to-man defense at the start of the game, maintain arm's length and do not attempt steals in the paint area. Target: Finish the first half with a maximum of 1 personal foul.
- **Output distribution on tough nights:** In a quarter of the weak games you contributed only 0.5 PIR (compared to an average of 6.0 in the window and 14.5 in good ones); Action: On nights when initial shots are not falling, focus on generating easy points through off-ball movement and fighting for offensive rebounds. Target: Avoid dropping below 3 PIR even in difficult games.

3-Week Plan

1. **Foul management in the opening phase:** Focus on set defense without reaching in during the first 6 minutes of each half to avoid early benching and maintain a high minutes streak (Target: No more than 1 foul in the first half).

2. **Shot focus in the paint and mid-range:** In light of the 60% (18/30) on two-pointers vs. 26% (7/27) on three-pointers, prioritize drives to the basket and mid-range shots over difficult shots beyond the arc (Target: Maintain a minimum of 55% accuracy on two-pointers in every game).
3. **Constant offensive involvement:** Make sure to take at least 5-7 shots at the basket per game to prevent output from disappearing on tough nights (Target: Minimum contribution of 5 points or more in every game of the next window).
