A 10-game window was chosen because below that the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles. Background graphics must be checked in the print dialog.

To Preserve

- **Exceptional accuracy beyond the arc:** Shooting in the 99th percentile of the league with 51% (25/49) from three in the window, including 62% (8/13) in the last three games.
- **High efficiency finishing inside:** Recording 58% (23/40) for two points throughout the window and 62% (8/13) in the last 3 games, while maintaining relative consistency in the paint areas.

To Improve

- **Foul concentration in the final quarter:** Out of 34 fouls accumulated in the window, 13 fouls (38%) were committed in the 4th quarter. Action: Keep hands back and avoid creating unnecessary contact with pick-and-roll screeners in the closing minutes. Target: No more than 2 fouls in the 4th quarter per game.
- **Extreme output variance between evenings:** The PIR floor stands at only 1.5 compared to an average of 12.0 in the window. Action: Generate easy shots through off-ball movement early in the game to get into a quick rhythm. Target: Minimum 8 PIR in each first half.
- **Low passing volume relative to position:** Recording an average of only 1.5 assists and the 44th percentile in the league for a small forward. Action: Quick return passing after penetration toward an open corner player. Target: Raising the assist average to 2.5 per game.

3-Week Plan

1. Reducing late fouls: Maintaining an arm's length distance in man-to-man defense in the 4th quarter to reduce the number of fouls from 3.8 to 2.5 on

average.

- 2. Increasing offensive involvement at the start: Initiating at least 2 safe shots in the 1st quarter to avoid entering games with a negative or low index.
- 3. Decision-making in transition offense: Passing the ball cleanly instead of unnecessary turnovers under pressure, aiming to keep under 1.5 turnovers per game.
