Analysis Summary

In his 25% weakest games he contributed an average of only 1.0 - almost no measurable contribution - compared to an average of 11.5 in the window and 26.5 on his best nights. This means the average relies on some games, not all. His minutes ranged between 6 and 34

- Some of the variance is rotation rather than the player.

A 10-game window was chosen because below that the average is too noisy (standard error of 3.2 points in 5 games vs. 2.2 in 10), and above it mixes different periods and roles. Check "Background graphics" in the browser's print dialog.

Maintain

- **Passing Efficiency and Playmaking:** An average of 4.1 assists in the window with a high league percentile of 84, and in the last 3 games this figure rose to 7.3 assists (including a high of 10 assists against Hapoel Nahariya), indicating stable and consistent court vision in running the offense.
- **Close-Range Finishing:** Maintaining a high percentage of 64% (16/25) on two-point shots in the window, reflecting good decision-making and sharp finishing on drives to the paint as part of the core PG role.

Improve

- **Curbing Turnovers in the 4th:** 9 out of 19 turnovers in the window (47%) are concentrated in the 4th quarter, generating unnecessary pressure and a high cost in the plus-minus metric during clutch minutes. Action: In transition offenses in the final quarter, execute an early stop to the dribble instead of forcing a pass into traffic. Target: No more than one turnover in the 4th quarter per game.
- **Early Foul Management:** 8 out of 22 fouls (36%) were accumulated in the 2nd quarter, which sometimes leads to restricted playing time (such as only 6 minutes against Elitzur Yavne). Action: When defending the mid-range in the 2nd quarter, maintain arm's length without making contact on the perimeter. Target: Maximum of one foul in each first half.
- **Expanding 3-Point Shot Volume:** Despite a good percentage of 38% (9/24) in the window, the volume is low and requires alignment with the point guard position. Action: Take at least 2 open shots beyond the arc in each half when the defense drops back in the pick-and-roll. Target: Raising the average to 3.5 outside shots per game at the same success percentile.

3-Week Plan

1. **Week 1 - Turnover Management and Decision Making:** Focus on reducing ball turnovers on difficult passes in the 4th quarter through practicing controlled dribble stops and using safe short-range passes. Success metric: Maximum of a single turnover in the game's final minutes.
2. **Week 2 - Defensive Discipline and Foul Prevention:** Maintaining correct positioning in the 2nd quarter and avoiding reaching hands in one-on-one situations. Success

metric: Finishing the first half with a maximum of one personal foul.

3. **Week 3 - Offensive Aggressiveness and Shot Volume:** Increasing outside and mid-range shot volume according to pick-and-roll situations, while maintaining a shooting percentage above 40% from three. Success metric: Minimum of 3 outside shots per game.
